

7th Grade Cultural Geography

Cultural Geography is the social science dealing with the ways man adapts to his physical and cultural surroundings. The student will be introduced to the tools and physical surroundings relevant to the study of human environmental impact and the interdependence of the world's regions. Throughout the various course units, the history and diversity of world cultures, the reality of human interdependence, and the need for world cooperation will be stressed. The student will become familiar with the tools and skills needed to understand the role of multiculturalism, technology, and the environment in the location and distribution of human activities.
