Formative Performance Task

Using SOAPSTone, scholars will analyze a minimum of one primary source document and one secondary source document on the same topic.

After using SOAPSTone to analyze both documents, the Question Formulation Technique will be utilized as the teacher and scholars create one question based on the primary and secondary documents given to them.

Then, students will collaboratively create one thesis statement that aligns with the question created.

Using evidence gleaned from the SOAPSTone analysis of the primary source document and secondary source document, scholars will identify information via a graphic organizer to support the thesis using specific and relevant information from the primary source document and the secondary source document.

Using evidence gleaned from the SOAPSTone analysis of the primary source document and secondary source document, scholars will utilize the information identified to apply historical reasoning skills as they support the thesis and refute a potential opposing argument.

Scholars will use appropriate structure and language usage when supporting and/or refuting an argument.
