

SCHOOLYARD FIELD TRIPS

Exploring Energy 2020-21: 8th Grade

*In fall 2021, due to transportation limitations, 8th graders were unable to visit the Evergreen Heritage Center, so the program's environmental experiences were conducted in the schoolyard and the classroom. Below are photos from the schoolyard module, which provided a virtual coal mining experience where students were provided with a mining scenario card with mining guidelines and regulations and a "coal mine". They then had to **develop the mine, safeguard the environment, and make as much money as possible.***
